[DAP] Progress Note

Data

90-minute peer recovery support group. Marcus attended for full duration, contributed once regarding job loss and the impact on his sense of identity. Affect engaged during others' shares; observable reduction in psychomotor restlessness compared to admission week. No safety concerns.

Assessment

Engagement improving. Continues to express ambivalence about long-term recovery but is participating in milieu. Peer connection appears protective.

Plan

Continue daily peer-support groups. Schedule family-coordination call with brother for boundary-setting and post-discharge planning.
